## E. Praktikum Jobsheet

Langsung saja kita praktikkan untuk menggunakan Ajax form dan validasi disisi client.

### Praktikum 1. Modal Ajax Tambah Data (Data User)

1. Kita buat form tambah data baru dengan menerapkan modal dan proses ajax.
2. Pertama yang kita siapkan adalah menambahkan *library jQuery Validation* dan *Sweetalert* ke aplikasi web kita. Caranya kita tambahkan link kedua *library* tersebut ke `template.blade.php`, library sudah disediakan oleh adminLTE.

```
17 |
18 | <!-- JQuery Validation -->
19 | <script src="{{ asset(path: 'plugins/jquery-validation/jquery.validate.min.js') }}"></script>
20 | <script src="{{ asset(path: 'plugins/jquery-validation/additional-methods.min.js') }}"></script>
21 | <!-- SweetAlert 2 -->
22 | <link rel="stylesheet" href="{{ asset(path: 'plugins/sweetalert2-theme-bootstrap-4/bootstrap-4.min.css') }}">
```

3. Selanjutnya Kita modifikasi view `user/index.blade.php`, kita tambahkan tombol untuk membuat form popup ajax Kita tambahkan kode berikut, untuk membuat form modal tambah data user dengan ajax

```
<a class="btn btn-sm btn-primary mt-1" href="{{ url(path: 'user/create') }}">Tambah</a>
<button onclick="modalAction('{{ url(path: 'user/create_ajax') }}')" class="btn btn-sm btn-success mt-1">Tambah Ajax</button>
```

4. Selanjutnya kita tambahkan kode berikut pada **akhir** `@section('content')` pada view `user/index.blade.php`

```
48 | <div id="myModal" class="modal fade animate shake" tabindex="-1" role="dialog" data-backdrop="static" data-keyboard="false" data-width="75%" aria-hidden="true"></div>
```

5. Kemudian kita tambahkan kode berikut pada **awal** `@push('js')` pada view Sehingga tampilan kode program akan seperti berikut

```
53 |
54 | <script>
55 |     function modalAction(url = '') {
56 |         $('#myModal').load(url, function() {
57 |             $('#myModal').modal('show');
58 |         });
59 |     }
60 |     var dataUser;
61 |     $(document).ready(function() {
62 |         dataUser = $('#table_user').DataTable({
63 |             // serverSide: true, jika ingin menggunakan server side processing
64 |             serverSide: true,
65 |             ajax: {
66 |                 "url": "{ url(path: 'user/list') }",
67 |                 "dataType": "json",
68 |                 "type": "POST",
69 |                 "data": function(d) {
70 |                     d.level_id = $('#level_id').val();
71 |                 }
72 |             },
73 |             columns: [{
74 |                 // nomor urut dari laravel datatable addIndexColumn()
```

6. Selanjutnya Kita modifikasi route/web.php untuk mengakomodir operasi ajax

```
45 | Route::get('/create_ajax',[UserController::class,'create_ajax']); //menampilkan halaman form tambah user
46 | Route::post('/ajax',[UserController::class,'store_ajax']); // menyimpan data user baru
```

7. Kemudian Kita tambahkan fungsi create\_ajax() pada file UserController.php

```
1 reference | 0 overrides | Codeium: Refactor | Explain | Generate Function Comment | X
160 | public function create_ajax(): mixed|View{
161 |     $level = LevelModel::select('level_id', 'level_nama')->get();
162 |
163 |     return view('user.create_ajax')->with('level', $level);
164 | }
165 |
166 |
```

8. Setelah itu, kita buat **view baru** user/create\_ajax.blade.php untuk menampilkan form dengan ajax

9. Kemudian untuk mengkomodir proses simpan data melalui ajax, kita buat fungsi `store_ajax()` pada `UserController.php`

```
195 public function store_ajax(Request $request): JsonResponse|mixed
196 {
197     // cek apakah request berupa ajax
198     if ($request->ajax() || $request->wantsJson()) {
199         $rules = [
200             'level_id' => 'required|integer',
201             'username' => 'required|string|min:3|unique:m_user,username',
202             'nama' => 'required|string|max:100',
203             'password' => 'required|min:6'
204         ];
205
206         $validator = Validator::make($request->all(), $rules);
207
208         if ($validator->fails()) {
209             return response()->json([
210                 'status' => false,
211                 'message' => 'Validasi Gagal',
212                 'msgField' => $validator->errors(),
213             ]);
214         }
215
216         UserModel::create($request->all());
217         return response()->json([
218             'status' => true,
219             'message' => 'Data user berhasil disimpan'
220         ]);
221     }
222     redirect(to: '/');
223 }
224
```

10. OK, sekarang kita coba melakukan proses tambah data user menggunakan form ajax. Amati apa yang terjadi dan laporkan pada laporan *jobsheet* dan *commit* di github kalian!!!

## Praktikum 2. Modal Ajax Edit Data (Data User)

1. Pada Praktikum 2 ini, kita akan melakukan koding untuk proses edit menggunakan ajax.
2. Pertama-tama, kita **ubah** dulu fungsi `list()` pada `UserController.php` untuk mengganti **tombol edit** untuk bisa menggunakan modal

```
2 references | 0 overrides | Codeium: Refactor | Explain | Generate Function Comment | X
32 public function list(Request $request): JsonResponse
33 {
34     $users = UserModel::select('user_id', 'username', 'nama', 'level_id')
35         ->with('level');
36     // Filter data user by level_id
37     if ($request->level_id) {
38         $users->where('level_id', $request->level_id);
39     }
40     return DataTables::of($users)
41         // Menambahkan kolom index / no urut (default nama kolom: DT_RowIndex)
42         ->addIndexColumn()
43         ->addColumn('aksi', function ($user): string { // Menambahkan kolom aksi
44             // $btn = '<a href="' . url('/user/' . $user->user_id) . '" class="btn btn-info btn-sm">Detail</a> ';
45             // $btn .= '<a href="' . url('/user/' . $user->user_id) . '/edit' . '" class="btn btn-warning btn-sm">Edit</a> ';
46             // $btn .= '<form class="d-inline-block" method="POST" action="' . url('/user/' . $user->user_id) . '">
47             //     csrf_field() . method_field('DELETE') .
48             //     '<button type="submit" class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah Anda yakin menghapus data ini?\');">
49             //         Hapus
50             //     </button>
51             // </form>';
52
53             $btn = '<button onclick="modalAction(\'\' . url(path: "/user/' . $user->user_id . '/show_ajax") . '\')" class="btn btn-info btn-sm">Detail</button> ';
54             $btn .= '<button onclick="modalAction(\'\' . url(path: "/user/' . $user->user_id . '/edit_ajax") . '\')" class="btn btn-warning btn-sm">Edit</button> ';
55             $btn .= '<button onclick="modalAction(\'\' . url(path: "/user/' . $user->user_id . '/delete_ajax") . '\')" class="btn btn-danger btn-sm">Hapus</button> ';
56             return $btn;
57         })
58         ->rawColumns(['aksi']) // Memberitahu bahwa kolom aksi mengandung HTML
59         ->make(true);
60 }
```

3. Selanjutnya kita modifikasi `routes/web.php` untuk mengakomodir request edit menggunakan ajax

```
49 Route::get('/{id}/edit_ajax', [UserController::class, 'edit_ajax']);
50 Route::put('/{id}/update_ajax', [UserController::class, 'update_ajax']);
```

4. Kemudian, kita buat fungsi `edit_ajax()` pada `UserController.php`

```
1 reference | 0 overrides | Codeium: Refactor | Explain | Generate Function Comment | X
225 public function edit_ajax($id): Factory|View
226 {
227     $user = UserModel::find($id);
228     $level = LevelModel::select('level_id', 'level_nama')->get();
229
230     return view('user.edit_ajax', data: ['user' => $user, 'level' => $level]);
231 }
232
```

5. Kita buat **view baru** pada `user/edit_ajax.blade.php` untuk menampilkan form view Ajax

### Praktikum 3. Modal Ajax Hapus Data (Data User)

1. Pada Praktikum 3 ini, kita akan melakukan koding untuk proses hapus menggunakan ajax.
2. Pertama-tama, kita ubah dulu routes/web.php untuk mengakomodir request halaman konfirmasi untuk menghapus data

```
51 Route::get('/{id}/delete_ajax', [UserController::class, 'confirm_ajax']);
52 Route::delete('/{id}/delete_ajax', [UserController::class, 'delete_ajax']);
```

3. Kemudian kita buat fungsi confirm\_ajax() pada UserController.php

```
273 public function confirm_ajax(string $id): Factory|View
274 {
275     $user = UserModel::find($id);
276
277     return view('user.confirm_ajax', data: ['user' => $user]);
278 }
279
```

4. Selanjutnya kita view untuk konfirmasi hapus data dengan nama user/confirm\_ajax.blade.php

The screenshot displays an AdminLTE dashboard with a sidebar menu on the left containing options like Dashboard, Data Pengguna, Level User, Data User, Data Barang, Kategori Barang, Data Barang, Data Supplier, Supplier, Data Transaksi, Stok Barang, and Transaksi Pengeluaran. The main content area is titled 'Daftar Barang' and features a table with columns ID, Kode Barang, and Nama. A modal window titled 'Tambah Data Barang' is open, containing the following fields:

- Kategori: A dropdown menu with the option '- Pilih Kategori -'.
- Kode Barang: A text input field.
- Nama Barang: A text input field.
- Harga Beli: A text input field.
- Harga Jual: A text input field.

At the bottom of the modal are two buttons: 'Batal' (Cancel) and 'Simpan' (Save). The background shows a table of items with columns for ID, Kode Barang, Nama, and Harga. The 'Harga Jual' table has columns for Harga and Aksi, with buttons for 'Detail', 'Edit', and 'Hapus'.
